

# Chess AI improvement through an evolutionary approach

Cédric Guillot

CPSC 565

April 9, 2013

# CHESS

To win: don't play

## 1 Introduction

## 2 Implementation / Strategy

- Tools
- Architecture
- Board evaluation / parameters evaluation

## 3 Results

- Set-up
- Evolved AI

## 4 Future work

# Chess AI history

- 1951 - Alan Turing develops on paper the first program capable of playing a full game of chess
- 1956 - John McCarthy invents the alpha-beta search algorithm
- 1957 - First practical chess program, Alex Bernstein and a team of Russian programmers
- 1981 - Cray Blitz becomes the first computer to gain a master rating (2200 ELO)
- 1997 - Deep Blue wins a six-game match against Garry Kasparov
- Today - Computers have reached 3250 ELO ratings

## 1 Introduction

## 2 Implementation / Strategy

- Tools
- Architecture
- Board evaluation / parameters evaluation

## 3 Results

- Set-up
- Evolved AI

## 4 Future work

# Tom Kerrigan's Simple Chess Program (TSCP)

- Chess engine used for playing all the games
- Written in 1997
- Negamax algorithm for the AI

# GUI: GNU Xboard

# Architecture

Figure: TSCP and evolution algorithm plugin architecture

# Board evaluation / parameters evaluation

- Board evaluated at each move during the game, using the pieces values
- Individuals of the same generation compete against each other
  - $\frac{n(n-1)}{2}$  games per generation
  - one game as white, one as black
- Point system: 0 for loss, 3 for win, 1 for stalemate or draw

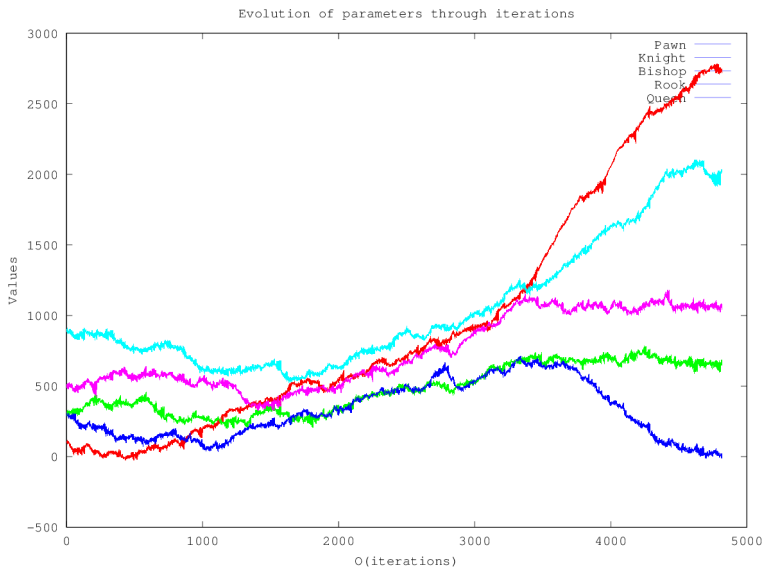

- 1 Introduction
- 2 Implementation / Strategy
  - Tools
  - Architecture
  - Board evaluation / parameters evaluation
- 3 Results
  - Set-up
  - Evolved AI
- 4 Future work

# Set-up

- Search depth:  $n = 1$
- One day and a half running on a standard laptop
- Optimized parameters: pawn(100), knight(300), bishop(300), rook(500) and queen(900) values
- Evolution strategy parameters:  $\mu = \frac{1}{2}\lambda = 4$
- Static strategy parameters: RAND(-15, 15)

# Evolved AI

- Original AI against human
- Evolved AI

- 1 Introduction
- 2 Implementation / Strategy
  - Tools
  - Architecture
  - Board evaluation / parameters evaluation
- 3 Results
  - Set-up
  - Evolved AI
- 4 Future work

# Future work

- Stabilize the algorithm
  - Boundaries for values
- Evolving strategy parameters
